This is a brief description of the solution
   a.   The solution uses JMS for sending/receiving messages
   b.   The solution uses Native Java Classes for IBM MQ (shipped with MQ installation)
        to create new topic/queue dynamically.
   c.   For supported configuration options, check the following Configuration classes
              IbmMqBaseChannelProperties
              IbmMqBinderConfigurationProperties
              IbmMqBindingProperties
              IbmMqConsumerProperties
              IbmMqExtendedBindingProperties
              IbmMqMessageChannelBinderConfiguration
              IbmMqProducerProperties
              IbmMqProperties
